Garmin to Offer 3 Programs for G500 and G600 Data Card Discounts

Receive a Free or Reduced Price Supplemental Data Card!

Garmin is pleased to announce three new programs for customers to upgrade their existing supplemental data card for a G500/G600 system. With the latest version of GDU software (version 7.00), a new, 8GB supplemental data card is required. The new supplemental data card (part number 010-00769-A1) will replace existing supplemental data cards (010-00769-43 and -44). The supplemental data card contains all of the aviation databases, including FliteCharts, Terrain, SafeTaxi, Airport Directory, and Obstacle databases.

Garmin has three options for customers looking to get the proper supplemental data card for a new installation or an upgrade to an existing installation:

Option 1 – Free supplemental data card with qualifying purchase

During the month of April 2015, simply purchase the Garmin avionics outlined below, and receive a free supplemental data card. To qualify for this program with existing avionics, the G500/G600 and/or GDL 88 must be registered on [myGarmin](http://myGarmin.com). (Note: this process is different than subscribing for databases on the [flyGarmin](http://flyGarmin.com) website).

Additionally, serial numbers for an existing installation of G500/G600 and/or GDL 88 must be provided at the time of order. Serial numbers of newly purchased equipment as part of this promotion are not needed. The original supplemental data card from an existing G500/G600 installation must also be returned to Garmin in order to receive the free supplemental data card. The table below outlines the various scenarios for this option.

Existing Avionics:	Additional Qualifying Avionics Needed to be Purchased:	You receive:
G500/G600 and GDL 88	None	Free Supplemental Data Card (010-00769-A1)
G500/G600	GDL 88	
GDL 88	G500/G600	
Neither a G500/G600 or GDL 88	G500/G600 and GDL 88	

To qualify for this program, an existing G500/G600 and/or GDL 88 must be registered for warranty purposes on www.myGarmin.com. Additionally, serial numbers for an existing installation of a G500/G600 and/or GDL 88 must be provided at the time of order. This option expires on April 30, 2015.

Option 2 – Trade in an existing supplemental data card

For customers who already own a G500 or G600, an existing 010-00769-43 or 010-00769-44 supplemental data card can be traded in for a new, pre-programmed 010-00769-A1 supplemental data card for a discounted price of \$199! This trade-in program will be available until January 31, 2015.

Existing Supplemental data card	New, Pre-Programmed Supplemental data card	Net Price (after return)
010-00769-43	010-00769-A1	\$199.99
010-00769-44		

Option 3 – Purchase a blank supplemental data card

Purchase a blank data card for your G600/G500 system. These cards are not pre-programmed with aviation databases. This option is perfect for customers who just need the new, larger data card and already have a database subscription or need an additional Supplemental data card as a spare.

There are no pre-requisites needed to qualify for this option, simply call and order as many blank data cards as desired. There is no expiration date on this blank data card promotion, and is expected to be available going forward for the foreseeable future.

Device	Original Part Number(s)	Blank Data Card Part Number	Price
G600	010-00769-43	010-01431-01	\$99.00
G500	010-00769-44		

The G500, G600, and GDL 88 are included in Garmin's Installation Policy when this system is to be installed in a certified aircraft. The G500, G600, and GDL 88 are included in the Certified Avionics Rebate Program. For more information on both of these programs, please consult the Marketing Program booklet found on the Dealer Resource Center website.
